

**NOTE: This fuse holder is shipped WITHOUT a fuse installed. Ron Francis Wiring offers the MF-10 (100 amp fuse) or the MF-25 (125 amp fuse) for this holder.**

The Mega fuse system can be used to protect the battery feed wire to your fuse panel, alternator or other heavy load devices. Follow the drawing below for mounting the unit. **Important: Mount the Mega fuse holder AWAY from any heat source. Mounting this unit close to a heat source will cause the Mega fuse to fail prematurely.**

To remove the splash resistant cover, press the front cover clip and lift the cover. Under the cover are two 8 millimeter studs with nuts installed for mounting the Mega fuse and wire cables. **NOTE: This unit is designed to accept one Mega fuse and two 5/16 ring terminals. Only use number four to eight wire gauge wire when making wire cable connections to this unit.**
